BASIC-ABSTRACT:

The protective foot is filled to the lower end of a tubular leg on a piece of furniture, in order to protect the floor. It may be fitted to a leg which is inclined to the vertical.

The foot has a pad (23,24) which is soft so as not to damage the floor and is glued to a hard backing plate. A flexible anchor device (19,21,22) is connected to the top of the hard backing plate. It can accommodate a considerable amount of misalignment and is shaped so that it easily slides into a tubular leg but is hard to pull out.

USE/ADVANTAGE - Protective foot is flexibly attached to bottom of leg on piece of furniture, to avoid scratching floor.
